---

### Version 1.20

- **Release to fix the following issues in March 2023**

1. Normalizing WAV files that had been split during long recordings was not possible.
2. Files created by normalizing and exporting could not be played by some apps.
3. Other minor issues were also fixed.

### Version 1.10

- **Release to fix the following issue in December 2022**

1. When the Home Screen was open, some Apple products were not recognized when they were connected by USB.
2. Other minor issues were also fixed.

### Version 1.01

- **Released as mass production in November 2022**
